Fortuna Admissions

INTRODUCTION

Every year, the expert coaches at Fortuna Admissions work with many successful applicants to the MBA at Stanford GSB. There are now so many of them that we could fill the entire MBA classroom in Palo Alto.

Many of them start their journey to Stanford GSB with the understandable question about their chances of admission to the most selective MBA on the planet. In 2024 the school received 7,295 applications for a class of 424 students. With a higher admissions yield than HBS and other top business schools, Stanford knows that over 90% of the admit offers they make will be accepted.

“Why did you choose me among so many talented and highly accomplished applicants?” In our regular interviews with the Dean of Stanford MBA Admissions and the Director of Outreach, they comment on how often the incoming students feel a sense of imposter syndrome.

As you review the **Fortuna Deep Dive Analysis of the Stanford GSB MBA Classes of 2023 & 2024**, we encourage you to instead think, **“Why *not* me?”**

The annual MBA Class Profile that Stanford publishes includes basic details about the incoming class. The **3.75 average GPA** is drawn from undergraduate degrees in Engineering, Economics & Social Sciences, Business, Math/Sciences and Arts/Humanities. **But where did they go to school, in which countries, and what exactly did they study?**

And from the **5.1 average years of work experience** there were plenty of admitted students from consulting, banking & financial services, technology, government & non-profit, FMCG, healthcare and the military. **But which companies did they work for, in what role, and how many changed employers before joining the Stanford MBA?**

In this Fortuna Deep Dive Analysis, you will find the profiles of over 700 students in the MBA Classes of 2023 & 2024, representing around 80% of the student body.

This is the most detailed analysis of the Stanford MBA Class ever published.

1 The biggest undergrad feeders

Among more than 150 academic institutions in the US and the rest of the world, we have calculated the top feeder colleges and most popular degrees/majors.

2 Career paths

We have identified many hundreds of full-time positions that Stanford students pursued prior to starting their MBA, with a comparison of the best-represented employers and most common job roles.

3 Geographic diversity

From cities on the east and west coasts to countries in Asia, Europe and LatAm, we have assessed mobility and where GSB students have gained academic and professional experience

The analysis of Stanford GSB's Classes of 2023 & 2024 reveals both **enduring patterns and emerging shifts in business leadership**. While certain universities and employers dominate the resumes of admitted Stanford MBA students, we have captured the increasing diversity of backgrounds – from climate tech entrepreneurs to public sector innovators – that reflect the GSB's mission to develop leaders who will transform both business and society.

As we emphasize in the array of Fortuna resources, the Stanford MBA Admissions Team is looking for academic and professional excellence, but also to assess the positive impact you have had – at school, at work or in the community. They want to find out **who you are, not simply what you have done**. So beyond the Ivy League, MBB, Goldman and Google, the GSB application is the opportunity to share your story and explain what matters most to you.

Remember that for every admit who did undergrad at Princeton, Brown or Cornell there were others from Harvard, Stanford and Yale who did not make the cut. And though many have McKinsey, Morgan Stanley, Meta or the Marines on their resume, plenty of consultants, bankers and software engineers failed to stand out.

What also matters is your personal story...

– the choices you have made, the hurdles you have overcome, and the unique difference you want to make. At Fortuna, we love working with clients to dive deep into their individual narratives to uncover how they can be set apart from the competition.

We hope you find this Deep Dive into the Stanford MBA Classes of 2023 & 2024 insightful and inspiring. We encourage you to [book a free consultation](#) with our dream team of admissions insiders, so we can begin exploring how your background and story may be the key to unlocking your success at Stanford GSB.

BACKGROUND

As Stanford Graduate School of Business (GSB) maintains its position as the world's most selective MBA program, understanding the composition of its student body provides valuable insights into both the school's values and evolving trends in business leadership. This analysis of the Classes of 2023 and 2024 goes beyond Stanford's published class profiles to provide unprecedented depth into the academic and professional backgrounds that lead to admission success.

Our team analyzed over 700 student profiles across the classes of 2023 and 2024, representing approximately 80% of total enrollment, revealing both consistent patterns and emerging shifts in the pathways to Stanford GSB. While the school's commitment to diversity remains strong – **with women comprising 44% and international students 46-47%** of recent classes – our analysis reveals nuanced insights about the institutions, industries and experiences that shape the GSB community.

The Official Data

As with every other leading business school, Stanford GSB publishes an annual Class Profile with basic details about the incoming class. For the Classes of 2023 and 2024, the high-level summaries show diverse cohorts from around the world, with strong representation across various sectors and backgrounds.

According to the school's data, both classes are notably diverse with:

- Students from 63+ countries
- Over 300 organizations represented in work experience
- Backgrounds spanning technology, finance, consulting, public sector, military, nonprofits and entrepreneurship

ACADEMIC ANALYSIS: THE POWER OF A US EDUCATION

In looking at where students went for their undergraduate studies, **we found over 150 different universities represented, with roughly half located outside the US.** For a full list of universities attended, see the appendix.

However, although Stanford GSB proudly announces international student percentages of 47% and 46% for the Classes of 2023 and 2024 respectively, our analysis reveals a compelling insight: **73-75% of students actually completed their undergraduate studies at US institutions. This percentage rises to 82% when including those with US graduate degrees.**

Undergrad Location

Feeder Schools Show Consistent Patterns

50% of the class of **2023** attended just 15 top US universities. **47%** of the class of **2024** attended just 15 top US universities. Harvard and Stanford are the biggest undergrad feeder schools.

Students From US Universities

Harvard maintains its position as the top feeder school, with 37 students in 2023 and 31 in 2024. Stanford's own undergraduates secured 26 spots in 2023 and 16 in 2024. Yale and UPenn round out the top contributors, maintaining strong representation.

While Stanford GSB values international diversity in its student body, having a US educational foundation remains a significant advantage in the admissions process.

Students From Non-US Universities

Undergraduate Majors and Graduate Degrees

Beyond institutional representation, analysis of academic backgrounds reveals interesting patterns. Among undergraduate studies, **economics remains the most common major (22% of US university graduates), but often combined with second majors in Computer Science, Environmental Science or International Relations.** Engineering backgrounds show increasing diversity, moving beyond traditional mechanical and electrical engineering to include bioengineering, environmental engineering and systems design.

Graduate degrees, held by approximately 30% of students, show strategic academic progression. Common paths include technical master's degrees (particularly in computer science and data analytics), specialized business master's (like financial engineering or business analytics) and policy-focused degrees. **Notable is the increase in specialized certificates and non-degree credentials,** particularly in emerging technologies like artificial intelligence and blockchain.

PROFESSIONAL BACKGROUNDS

Finance, consulting and tech continue to consistently show the highest representation in both classes.

Top three pre-MBA industries:

26% Finance

20% Consulting

14% Technology

The convergence of tech with all sectors makes it increasingly hard to categorize companies.

Employment Sectors

Social Impact: Everyone is Doing It

While social impact is often associated with non-profit and public sector roles, GSB students **demonstrate commitment to impact across all sectors**. In traditional finance, approximately 15% of students worked in impact investing, ESG-focused roles or sustainable finance initiatives. Technology sector representation includes significant numbers working on education technology, healthcare access and environmental sustainability solutions.

Even in traditional industries, many successful candidates show impact focus through side projects, board roles or volunteer leadership. **Approximately 40% of students across both classes demonstrated significant social impact involvement alongside their primary professional roles**. This includes founding social enterprises, leading corporate social responsibility initiatives or serving on non-profit boards.

The data suggests GSB values candidates who **integrate social impact into their professional lives, regardless of sector**. This aligns with Stanford's mission of developing leaders who consider societal impact alongside business success. Notably, many candidates demonstrate ability to leverage business skills for social impact, whether through market-based solutions to social problems or innovative funding models for traditional non-profits.

40% of students demonstrated social impact involvement in their careers, including roles in impact investing, ESG and nonprofit leadership.

Industry Convergence

Traditional industry boundaries increasingly blur in recent GSB classes, reflecting broader economic trends. **Financial services professionals often worked in technology-focused roles, with approximately 30% of finance students having significant technology components to their work, particularly in fintech, digital banking or algorithmic trading.**

Cross-industry experience is increasingly common, with 30% of finance students having significant tech exposure, and many consultants transitioning to strategy roles in tech, startups or finance pre-MBA.

Similarly, consulting experience increasingly focuses on digital transformation, with many consultants specializing in technology implementation or digital strategy. Traditional industries show increasing technology integration, with manufacturing professionals working on Industry 4.0 initiatives, real estate professionals in PropTech ventures and healthcare professionals in digital health platforms.

Sustainability and impact themes cross traditional sector boundaries. **Energy sector professionals increasingly focus on renewable technologies, while finance professionals show growing experience in ESG investing and sustainable finance.** Even traditional manufacturing and consumer goods roles often involve significant sustainability or social impact components.

This convergence suggests **GSB values candidates who can navigate the increasingly complex intersection of technology, sustainability and traditional business models.** Many successful candidates demonstrate ability to bridge different sectors and approaches, reflecting the school's emphasis on innovative, cross-disciplinary leadership.

Employer Diversity and Concentration

■ Consulting ■ Finance ■ Tech ■ Other

The classes show a fascinating balance between diversity and concentration. While GSB attracts candidates from 250+ unique employers, **26 companies account for nearly one-third of the classes**, with McKinsey, Bain, BCG, Goldman Sachs and Google leading the way.

The concentration becomes more pronounced when considering career histories: those same **26 employers had at some point employed an astonishing 62% of the two classes**. Clearly, jobs at one of these employers out of college helped with career prospects and later, admission to the most competitive MBA program in the world.

Students with Experience at Top 26 Employers, Both Classes Combined

Data includes jobs held at time of admissions or previously

Geographic Analysis

Beyond educational backgrounds, the work experience of GSB classes shows significant geographic diversity. **While the United States, particularly the coastal hubs of New York and San Francisco, remains the primary location for pre-MBA work experience, emerging markets show growing representation.** Asia Pacific experience is prominent, with significant numbers working in Singapore, Hong Kong and India, particularly in finance and technology roles. Latin America shows strong representation through both regional offices of global firms and local enterprises, especially in Brazil and Mexico. European experience tends to concentrate in London, with additional representation across major continental financial centers.

Interestingly, this international experience often comes through global rotational programs at consulting firms, international transfers within technology companies or entrepreneurial ventures in emerging markets. **The data suggests GSB values global perspective gained through meaningful work experience, rather than simply nationality or origin.** This aligns with Stanford's mission to develop globally-minded leaders, with many students showing experience managing cross-border teams or leading international expansion initiatives.

Many students demonstrate global mobility in their pre-MBA careers, with approximately 30% having worked in multiple countries.

Career Paths

Analysis of pre-MBA career transitions reveals interesting patterns in how successful GSB candidates build their professional narratives. Finance professionals show less industry movement but significant role transitions, often moving from investment banking to private equity or venture capital.

The most common transition is from consulting into either technology or finance, with approximately 25% of former consultants making this switch before business school.

Technology sector employees demonstrate the most dynamic career paths, frequently moving between established tech giants and startups, or transitioning from technical to strategic roles. Public sector professionals often transition through impact-focused private sector roles before GSB, while healthcare professionals increasingly move into digital health or health-tech ventures.

Notable is the timing of these transitions – successful GSB candidates typically demonstrate both success in their initial career choice and thoughtful progression into new areas. These transitions often involve increasing responsibility or entrepreneurial elements, suggesting **GSB values candidates who can adapt and grow while maintaining impact and excellence across different contexts.**

PROFESSIONAL SECTOR DEEP DIVE

Consulting

Consulting continues to be a strong feeder industry to the GSB, but the numbers tell an interesting story.

20% of each class | Approximately 20% of each class worked in consulting when admitted, however, nearly *double* that number had consulting experience at some point in their pre-MBA careers.

28 different consulting firms were represented, though McKinsey, Bain and BCG (MBB) are clearly dominant. **Of the 124 people in the Class of 2023 who had experience in consulting, 61% had worked at McKinsey, Bain or BCG. In 2024, 55% of the former consultants came from one of these three firms.** 25 other consulting firms were represented, with a notable presence from firms like Deloitte and Accenture. There was also a growing representation from boutique strategy firms, as well as increasing numbers from technology-focused consulting practices.

Career progression patterns reveal consulting as both a destination and a launching pad:

- Many transitioned from consulting to tech or finance pre-MBA
- Strong representation in strategy and operations roles
- Notable presence in startup and entrepreneurial ventures

Students with Consulting Experience, '23 & '24
Classes Combined, MBB v Other Firms

For a full list of non-MBB consulting firms represented, see appendix.

Finance

An analysis of students from the financial services sector also reveals interesting patterns.

26% of students in both classes were working in finance at admission, but a remarkable 46% had worked in finance at some point pre-MBA.

121 different financial firms are represented, showing significant diversity. Unlike the 2020 class, where Goldman Sachs and other bulge bracket banks dominated, the 2023-24 classes show greater representation from private equity and venture capital firms.

Key trends in roles show evolution:

- Growing presence in growth equity and venture capital
- Increase in fintech and digital finance positions
- Strong showing from global investment firms
- Rise of ESG and impact investing roles

Career progression patterns reveal:

- Movement from traditional banking to PE/VC
- Transition from finance to entrepreneurship
- Shift toward technology-enabled financial services
- Focus on emerging markets and alternative investments

The data suggests Stanford GSB continues to attract finance professionals seeking transformation, whether within finance or as a launching pad to other sectors, particularly entrepreneurship and technology. The high percentage with finance experience also indicates the sector's value as foundational training for business leadership. In fact, our analysis reveals that there are 21 finance firms that had employed at around 45% of the two classes at some point. **The large bulge bracket banking programs still are excellent places to start for anyone hoping to eventually find their way to Palo Alto.**

Students with Experience at Top 21 Finance Employers, Classes of '23 & '24 Combined

Data includes both jobs at time of admission or previous jobs. For a full list of employers in this sector, see appendix.

Technology

14% of the classes of 2023 and 2024 were working in technology when admitted to the GSB. Career progression patterns reveal technology as both a destination and a launching pad.

Although there were 64 unique technology employers between the two classes, just 13 of these had employed multiple students. **Among students who had worked in tech, 41% had experience at Google, Meta or Microsoft.**

Key roles cluster in several areas:

- Product Management: Largest single category, particularly in software and consumer tech
- Engineering Leadership: Including founding engineers and technical directors
- Business Development: Focus on strategic partnerships and growth
- Data Science: Leadership roles in analytics and AI
- Policy and Strategy: Particularly in major tech platforms

The data shows an evolution in tech leadership paths:

- Strong representation from both established tech giants and high-growth startups
- Growth in enterprise software and B2B technology
- Notable number of founder/entrepreneurs in technology
- Rise in product management and strategy roles

Geographic distribution centers heavily in Silicon Valley, but with increasing representation from global tech hubs. The roles demonstrate a balance between technical and strategic positions, with many students showing progression from technical to business leadership roles.

This robust technology representation aligns with Stanford GSB's Silicon Valley location and focus on innovation, while showing diversification beyond traditional tech into emerging sectors and global markets.

Tech Sector	Job at time of admission or previously, both classes combined
Total	133
% of class	19%
Unique Employers	64
Employers with more than 1 admit	13

For a full list of tech employers, see appendix

Public Sector, Military, Non-Profit and Education

The public sector analysis of Stanford GSB Classes of 2023 and 2024 reveals a **significant presence across government, military, non-profit, education and civic organizations, representing 14% of the two classes. Of those students, 30% had experience with the US or Israeli military.**

Key trends across these sectors include:

- Strong focus on digital transformation and innovation
- Emphasis on climate action and environmental initiatives
- Strategic leadership roles in program development
- Intersection of military expertise with technology

The positions reveal an interesting mix of traditional public service roles and innovative approaches to social impact. Government roles include positions like Chief Digital Services Officer and Director of Strategy, indicating a focus on modernization. The education sector shows entrepreneurial activity with multiple founder/CEO positions in education administration and programs.

Non-profit roles demonstrate a strategic focus, with positions centered on program strategy and global initiatives. Several roles specifically address climate security and environmental challenges, reflecting growing emphasis on sustainability.

An interesting trend is the presence of innovation-focused positions across all categories, suggesting Stanford GSB is attracting public sector professionals who are driving transformation in their fields. This aligns with the school's mission of developing leaders who can create impact at scale, whether through traditional institutions or innovative social enterprises.

The military and defense positions show a particular focus on technology and strategic operations, indicating GSB's attraction for military leaders transitioning to business leadership roles. The positions demonstrate an evolution from traditional public service to innovative approaches in solving complex social challenges.

Notable is the mix of operational and strategic roles, with many positions focused on driving transformation within traditional institutions. This aligns with Stanford GSB's mission of developing leaders who can create impact at scale, whether through government service, military leadership or social enterprise innovation.

Public Sector 	Job at time of admission or previously, both classes combined 
Total	96
% of class	14%
Unique Employers	57
Employers with more than 1 admit	11

Industrial Sector

The industrial sectors (Real Estate, Energy, Construction and Manufacturing) show interesting representation patterns across the two classes, with a stronger presence in 2023 (10%) compared to 2024 (8%).

Real Estate and Manufacturing emerged as the dominant sectors, with roles spanning traditional and innovative spaces. Real Estate positions ranged from private equity and capital markets to emerging PropTech ventures, while Manufacturing showed diversity across advanced sectors (defense, aerospace, semiconductors) and traditional industries (food, textiles, automotive).

Key trends across these sectors include:

- Strong emphasis on technology integration and digital transformation
- Focus on sustainability, particularly in energy and manufacturing
- High representation in strategic leadership positions
- Notable presence of entrepreneurial ventures

The role distribution reveals a preference for strategic positions, with many students holding director-level and strategy-focused roles. Technical expertise positions, particularly in engineering and product management, form the second largest group, followed by financial roles in private equity and capital markets.

Most notably, these sectors show significant evolution from traditional operations to technology-enabled business models. This is evident in the rise of PropTech in real estate, Industry 4.0 initiatives in manufacturing and renewable energy innovations. These trends align with Stanford GSB's focus on innovation and transformation, even in traditional industries.

Industrial Sector	Job at time of admission or previously, both classes combined
Total	65
% of class	9%
Unique Employers	57
Employers with more than 1 admit	7

For a full list of employers in this sector, see appendix

Media, Entertainment and Consumer

The consumer sectors maintain a significant presence at Stanford GSB, representing 11% of the combined classes.

These students represent a diverse cross-section of media, entertainment, food & beverage and retail industries. The top employers from these sectors are Netflix, Hulu, Anheuser-Busch InBev and Kraft Heinz.

The media and entertainment contingent is particularly focused on content strategy and digital transformation, with many students holding senior strategy and analytics positions at major entertainment companies. Several students come from traditional media backgrounds but show a clear orientation toward digital innovation and content development.

In the food and beverage space, there is an interesting mix of traditional consumer packaged goods experience and innovative foodtech ventures. A notable trend is the increasing emphasis on sustainability and environmental strategy, particularly among those from established CPG companies.

The retail sector shows a similar pattern of traditional and innovative backgrounds, with several students bringing experience in e-commerce and digital retail transformation. Consumer services representatives often bring entrepreneurial experience, with several founders in the mix.

What stands out across these sectors is the global nature of the experience, with many students having managed international markets or led global business development initiatives. The roles generally reflect a focus on transformation, whether through digital innovation, sustainability initiatives or new business models.

Media/Entertainment/Food/CPG	Job at time of admission or previously, both classes combined
Total	83
% of class	12%
Unique Employers	68
Employers with more than 1 admit	9

For a full list of employers in this sector, see appendix

Healthcare

The healthcare sector shows consistent representation with 8% of both the classes. The sector spans traditional healthcare delivery, biotechnology, digital health and medical devices.

The roles reflect healthcare's rapid transformation, with many students straddling clinical, technological and business domains. **Traditional medical professionals, including physicians and clinical leaders, are well represented, but increasingly complemented by those with digital health and biotechnology expertise.** Several students bring entrepreneurial experience, particularly in health-tech startups and innovative care delivery models.

Leadership positions are diverse, ranging from clinical directors and biotech executives to startup founders and strategic advisors. There is significant presence in emerging areas like mental health services, digital therapeutics and healthcare analytics. The biotechnology segment shows particular strength with several students holding senior strategy and research positions at leading firms.

What distinguishes this cohort is the emphasis on transformation and innovation. Whether from established healthcare institutions or startups, these students typically show experience in modernizing healthcare delivery, developing new therapeutic approaches or improving healthcare access and equity. This aligns with Stanford GSB's focus on innovation and its proximity to both biotech hubs and digital health ventures.

Healthcare	Job at time of admission or previously, both classes combined
Total	60
% of class	9%
Unique Employers	47
Employers with more than 1 admit	7

For a full list of employers in this sector, see appendix

Entrepreneurship

Stanford has a reputation of attracting entrepreneurs. **Interestingly, however, people who identify themselves as founders or members of a founding team only make up approximately 7% of each class.**

The ventures reflect significant sector diversity. Healthcare and health-tech show strong representation, including digital health platforms, mental health services and medical devices. Social impact ventures are notably present, with founders addressing education access, environmental protection and women's health. Technology ventures span both enterprise and consumer applications, while several founders come from consumer sectors including food and beverage, retail and digital media.

The entrepreneurial roles show interesting patterns. **While many held CEO positions, others maintained founder roles while bringing in professional management, suggesting sophistication in company building.** Several founders had achieved exits or acquisitions before attending GSB, while others were actively running their ventures during admission.

Geographic and impact diversity is evident, with ventures ranging from Silicon Valley technology startups to social enterprises in emerging markets. Many founders show a pattern of combining social impact with scalable business models, particularly in education, healthcare and sustainability sectors.

Entrepreneurs	Job at time of admission or previously, both classes combined
Total	50
% of class	7%

While founders represent approximately 7% of recent classes, broader startup experience is significantly more prevalent. **About 25% of students had worked at startups** (defined as companies under 5 years old or fewer than 100 employees) in some capacity before GSB. This experience spans various roles, from early employees shaping product development to growth-stage professionals scaling operations.

The startup experience shows interesting sector patterns. **Technology startups dominate, particularly in enterprise software, fintech and digital health.** However, significant numbers come from direct-to-consumer brands, sustainability-focused ventures and education technology companies. Many students also gained startup experience through venture capital or consulting roles focused on early-stage companies.

Approximately 15% of students were among the first 10 employees at their companies, with several experiencing successful exits or significant growth.

This early-stage experience, whether as founders or early employees, appears valued by GSB admissions, particularly when candidates can demonstrate significant impact on company trajectory and key learning from the startup environment.

CONCLUSION

Our analysis of Stanford GSB's Classes of 2023 & 2024 reveals both enduring patterns and emerging shifts in business leadership. **While traditional feeders like consulting and finance remain strong, the increasing diversity of professional backgrounds – from climate tech entrepreneurs to public sector innovators – reflects GSB's mission to develop leaders who will transform both business and society.**

The data shows that **successful candidates increasingly combine excellence in traditional metrics with demonstrated innovation and impact.** Whether through digital transformation of established industries, founding mission-driven ventures or driving change in public institutions, GSB continues to attract individuals who align with its motto to "Change lives, change organizations, change the world."

At Fortuna, we have 13 years of experience guiding candidates from all over the world to a coveted spot at Stanford GSB. For a free assessment of your chances of admission, reach out to us for a [free consultation](#).
